Assignment-7 on BST

1. Implement a *binary search tree* (*BST*) program to insert 25 random integer keys (in the range 0 - 100) in the order as they get generated

2. After constructing this initial tree, perform the following operations:

- Delete 12th, 13th, and 14th random number sequentially and report all the intermediate trees

- Implement a program to convert this final tree into its mirror tree

Please assume the other details by yourself.
